

# OETIKER Stepless® Ear Clamps

## Features

- Narrow band, concentrated seal compression
- 360° Stepless® Design – no steps or gaps on inner circumference
- Specially formed strip edges reduce the risk of damage to the part being clamped
- Lightweight design
- Tampering is visible

The term “Stepless” refers to the absence of steps or gaps on the inner circumference of the clamp. The ingenious stepless design provides uniform compression and a 360° seal.

Standard series Stepless® Ear Clamps are especially well suited to applications involving both flexible and inflexible thin-walled hoses with high “Shore” hardness.

OETIKER Heavy Duty series Stepless® Clamps with particularly high retained loads are especially well suited to applications involving moulded thermoplastics or other less malleable materials with high “Shore” hardness. These are often used in the automotive industry.

## Material

**Application Example** Numerous applications in the vehicle industry, particularly in conjunction with EPDM and silicone hoses
