

Butterfly Valves with Stem Extensions (Aluminum), and HD Handle Kit

All Stem Extensions are factory installed to the valves.
Stem Extensions can not be ordered separately.

Stem Extensions can be ordered in any length up to 36 inches. The standard beginning size is 6 inches.

Any Extension longer than 12" automatically gets a Ubolt.

MaxxLife Butterfly Valve is stronger, lighter weight, and more corrosion and abrasion resistant, the valve features:

- Extendable neck for ease of operation
- 1-piece direct drive stem to disc connection and doesn't require any connecting adapters, welded parts or hardware as all other industry standard butterfly valves do.
- New specially formulated valve seat that will not harden even under extreme temperatures.
- Super thin disc design that can increase flow up to 20%.

MaxxLife Valves are built with an All-in-One, specially blended valve seat that can be used for all applications. It is an FDA compliant, abrasion resistant rubber that will not turn hard and cause valve failure, resisting temperature extremes from -40 to 300 degrees Fahrenheit. These valves also feature a special sealing, lubricated top stem design that keeps out corrosion.
