

BULK BAG – SUPER SACK

Description:

Bulk bags, also called Flexible Intermediate Bulk Containers (FIBC bags) or super sacks, are large, durable containers made from woven polypropylene for storing and transporting dry, flowable materials. They can hold loads of up to about 2,000 kg and are equipped with lifting loops for handling by forklifts or cranes. Available in different sizes, and capacities

Known for being cost-effective, space-efficient, and highly durable, these bags provide a safe and adaptable solution for bulk material handling. Common industries that utilize bulk bags include agriculture, chemical manufacturing, construction, food processing, mining, plastics, and waste management.
