

IPS Regulator Broom Elements

Broom elements are a heavy-duty, fiber-reinforced solid rubber element designed for railroad Maintenance of Way (MOW) equipment. Sometimes called a "whisker" these function as a replacement "whisker" on the broom reels of Kershaw and Knox Kershaw Ballast Regulators. These elements withstand extreme impacts to clear ballast from railway ties without damaging the underlying track infrastructure

175955 Broom Element

This fiber-reinforced rubber element is designed for the repeated punishment involved in clearing ballast from ties during track maintenance.

Measures: 2" diameter x 18" long

Weight: 2.7 lbs

175955-B "Flared" Ballast Broom Element

This whisker is designed with a flared end to increase both the wear life and the impact force of the broom.

Measures: 2" diameter x 18" long

Weight: 2.4 lbs
